

DHV TESTREPORT LTF

GIN FUSE 4 37		
Type designation	GIN Fuse 4 37	
Type test reference no	DHV GS-01-2901-24	
Holder of certification	GIN Gliders Inc.	
Manufacturer	GIN Gliders Inc.	
Classification	В	and the second second
Winch towing	Yes	AL PARTICIPAL CONTRACT
Number of seats min / max	1/2	
Accelerator	No	C. S.
Trimmers	Yes	

	BEHAVIOUR AT MIN WEIGHT IN	BEHAVIOUR AT MAX
Test pilots	FLIGHT (90KG)	WEIGHT IN FLIGHT (190KG
	Josef Bauer	Harald Buntz
	No release	No release
Inflation/take-off Pising behaviour	A Smooth, easy and constant rising	A Smooth, easy and constant rising
Special take off technique required		No
Landing	Α	Α
Special landing technique required	l No	No
<u>Speeds in straight flight</u>	Α	Α
Trim speed more than 30 km/h		Yes
Speed range using the controls larger than 10 km/h		Yes
Minimum speed	Less than 25 km/h	Less than 25 km/h
Control movement	Α	Α
Symmetric control pressure Symmetric control travel	, and the second s	Increasing Greater than 65 cm
-		
Pitch stability exiting accelerated flight Not carried out because the glider is not equipped w		
Pitch stability operating controls during accele Not carried out because the glider is not equipped w		
		,
Roll stability and damping Oscillations	A Reducing	A Reducing
Stability in gentle spirals Tendency to return to straight flight	A Spontaneous exit	A Spontaneous exit
Behaviour exiting a fully developed spiral dive	_	A Immediate reduction of rate of turr
Initial response of glider (first 180°) Tendency to return to straight flight	: Spontaneous exit (g force decreasing,	Spontaneous exit (g force
Turn angle to recover normal flight	rate of turn decreasing) : Less than 720°, spontaneous recovery	decreasing, rate of turn decreasing Less than 720°, spontaneous
		recovery
Symmetric front collapse	Α	Α
-	Rocking back less than 45° Spontaneous in less than 3 s	Rocking back less than 45° Spontaneous in less than 3 s
Dive forward angle on exit	Dive forward 0° to 30°	Dive forward 0° to 30°
Change of course Cascade occurs	1 0	Keeping course No
Folding lines used	l no	no
<u>Unaccelerated collapse (at least 50 % chord)</u>	Α	Α
-	Rocking back less than 45°	Rocking back less than 45°
Dive forward angle on exit	Spontaneous in less than 3 s Dive forward 0° to 30°	Spontaneous in less than 3 s Dive forward 0° to 30°
Change of course Cascade occurs	1 0	Keeping course No
Folding lines used		no
<u>Accelerated collapse (at least 50 % chord)</u>		
Not carried out because the glider is not equipped w	ith an accelerator	
<u>Exiting deep stall (parachutal stall)</u>	Α	A
Deep stall achieved		Yes
Recovery Dive forward angle on exit	r Spontaneous in less than 3 s : Dive forward 0° to 30°	Spontaneous in less than 3 s Dive forward 0° to 30°
	Changing course less than 45°	Changing course less than 45°
Cascade occurs		No
High angle of attack recovery	A	A Spontaneous in loss than 2 s
Recovery Cascade occurs	Spontaneous in less than 3 s No	Spontaneous in less than 3 s No
<u>Recovery from a developed full stall</u>	Α	Α
Dive forward angle on exit	·	Dive forward 0° to 30°
Collapse Cascade occurs (other than collapses)	No collapse	No collapse No
Rocking back	Less than 45°	Less than 45°
Line tension	Most lines tight	Most lines tight
Small asymmetric collapse	Α	Α
Change of course until re-inflation Maximum dive forward or roll angle		90° to 180° Dive or roll angle 0° to 15°
Re-inflation behaviour	Spontaneous re-inflation	Spontaneous re-inflation
Total change of course Collapse on the opposite side occurs	No (or only a small number of collapsed	Less than 360° No (or only a small number of
	cells with a spontaneous re inflation)	collapsed cells with a spontaneous re inflation)
Twist occurs		No
Cascade occurs Folding lines used		No no
Large asymmetric collapse	В	в
Change of course until re-inflation	<u> </u>	90° to 180°
Maximum dive forward or roll angle	Dive or roll angle 15° to 45°	Dive or roll angle 15° to 45° Spontaneous re-inflation
Re-inflation behaviour Total change of course	Spontaneous re-inflation Less than 360°	Spontaneous re-inflation Less than 360°
Collapse on the opposite side occurs	No (or only a small number of collapsed cells with a spontaneous re inflation)	No (or only a small number of collapsed cells with a spontaneous
Twist occurs		re inflation)
Cascade occurs	s No	No
Folding lines used	no	no

Small asymmetric collapse accelerated

Not carried out because the glider is not equipped with an accelerator

Not carried out because the glider is		
Large asymmetric collapse accel	<u>erated</u>	
Not carried out because the glider is	not equipped with an accelerator	
Directional control with a mainta	ained	
asymmetric collapse		A
	to keep course Yes	Yes
180° turn away from the collapsed side Yes possible in 10 s		Yes
Amount of control range bet	ween turn and More than 50 % of the symmetric control stall or spin travel	More than 50 % of the symmetric control travel
Trim speed spin tendency	Α	Α
<u></u>	Spin occurs No	No
	Spin occurs no	110
Low speed spin tendency	Α	Α
	Spin occurs No	No
<u>Recovery from a developed spin</u>	Α	Α
Spin rotation angl	e after release Stops spinning in less than 90°	Stops spinning in less than 90°
(Cascade occurs No	No
B-line stall	Α	Α
Change of course	before release Changing course less than 45°	Changing course less than 45°
Behaviour	before release Remains stable with straight span	Remains stable with straight span
	Recovery Spontaneous in less than 3 s	Spontaneous in less than 3 s
	d angle on exit Dive forward 0° to 30°	Dive forward 0° to 30°
(Cascade occurs No	No
<u>Big ears</u>	Α	A
E	ntry procedure Standard technique	Standard technique
Behaviour o	during big ears Stable flight	Stable flight
		Spontaneous in loss than 2 s
	Recovery Spontaneous in less than 3 s	Spontaneous in less than 3 s
Dive forwar	Recovery Spontaneous in less than 3 s d angle on exit Dive forward 0° to 30°	Dive forward 0° to 30°
<u>Big ears in accelerated flight</u>	d angle on exit Dive forward 0° to 30°	•
Big ears in accelerated flight Not carried out because the glider is	d angle on exit Dive forward 0° to 30° s not equipped with an accelerator	
Big ears in accelerated flight Not carried out because the glider is Alternative means of directional	d angle on exit Dive forward 0° to 30° s not equipped with an accelerator	Dive forward 0° to 30°
Big ears in accelerated flight Not carried out because the glider is Alternative means of directional 180° turn ach	d angle on exit Dive forward 0° to 30° a not equipped with an accelerator control A	Dive forward 0° to 30°
Big ears in accelerated flight Not carried out because the glider is Alternative means of directional 180° turn ach Stall	d angle on exit Dive forward 0° to 30° s not equipped with an accelerator control A ievable in 20 s Yes	Dive forward 0° to 30° A Yes

No other flight procedure or configuration described in the user's manual
