Product presentation

# EASINESS 3 – Hike & Fly & More

The EASINESS 2 Hike & Fly harness has retained its important position in our harness palette for a long time. In the third generation the Airbag-Protector is now fully integrated in the harness by means of a zip. As before, the Airbag is very easy to remove, and the reserve compartment is embedded in the Airbag-Protector.

Lengthened Legpads and revised speedloop foot-force gradient put the EASINESS 3 among the most comfortable of the light reversible harness class, and therefore suitable for everyday use: especially so because it inherits the EASINESS 2's high carrying comfort in rucksack mode. This quality combination opens up a wide area of use - from Hike und Fly, and traveling with a light paraglider rucksack, to general flying.

The EASINESS 3 is now produced in three sizes and therefore better suits a variety of pilot heights.

In the product presentation we present the EASINESS 3 and all its refinements.

# NEW: Delivery with Airbag Fitted

This third EASINESS version will now be delivered with its Airbag-Protector, already fitted in the harness. Because the majority of EASINESS 2s were ordered with the Airbag-Protector we have reversed this option. The EASINESS 3 price includes the Airbag-Protector so its normal price should not be compared directly with the Easiness 2 (delivered without Airbag).

## „No Airbag“ is now the Option

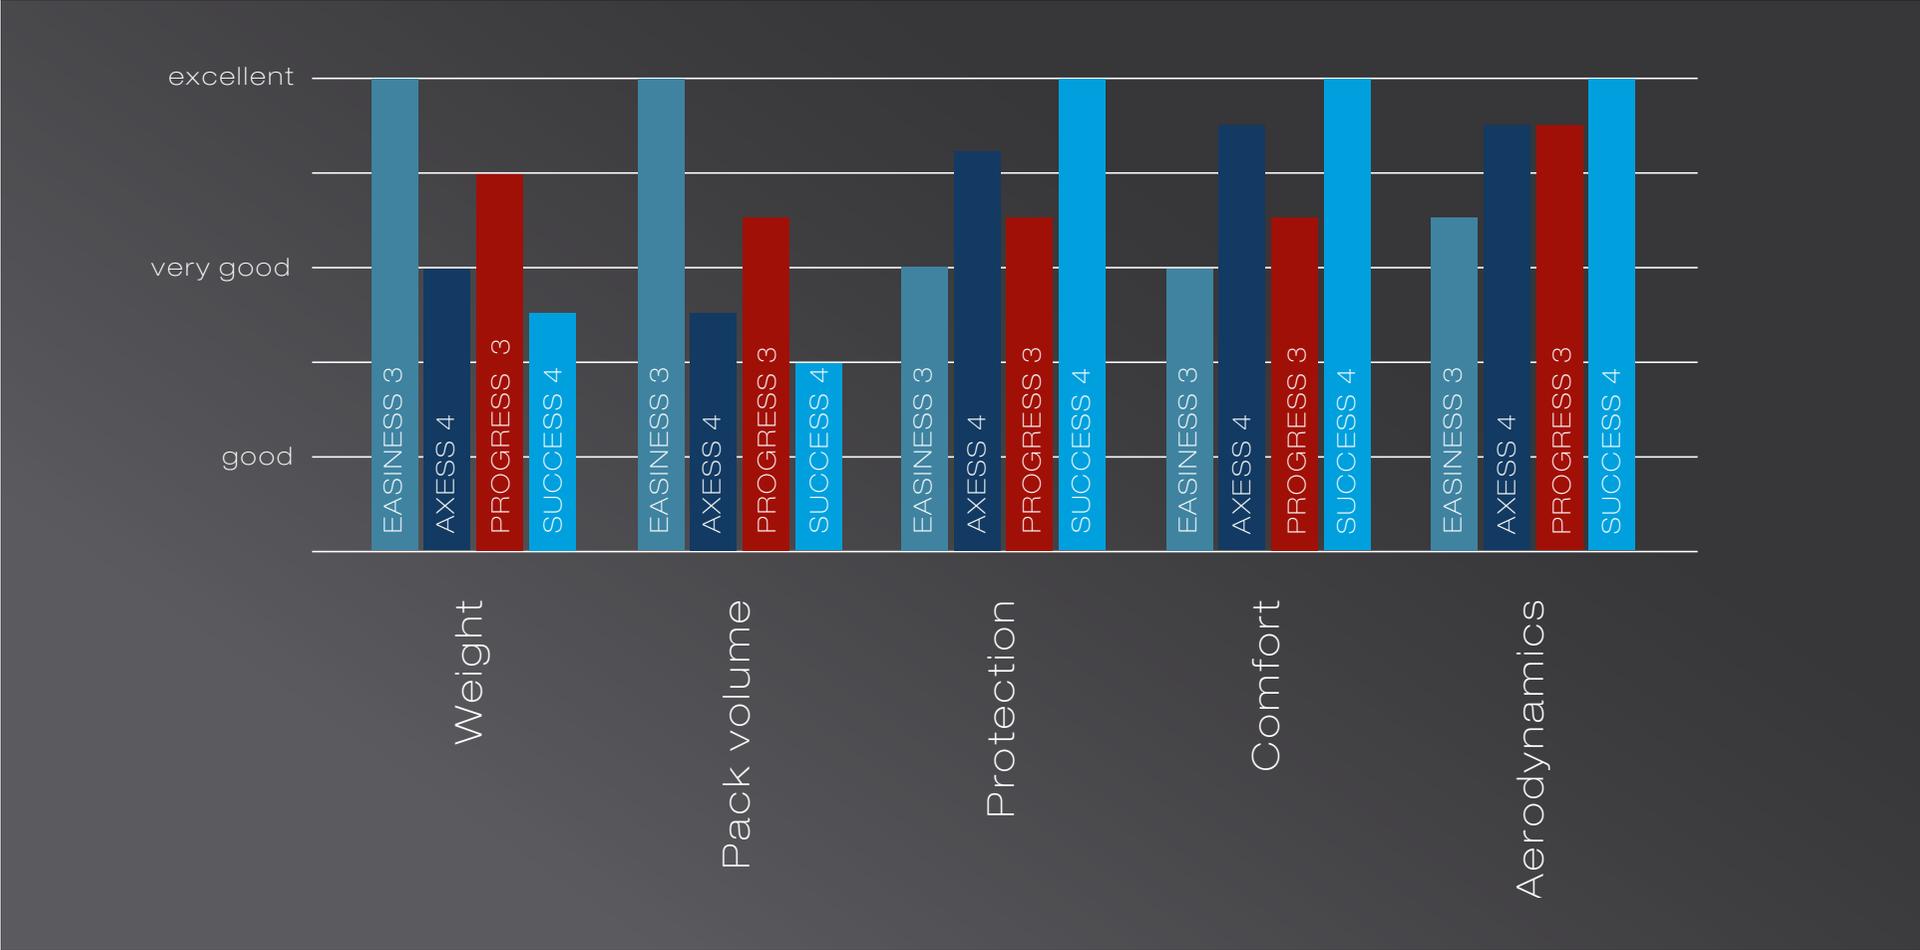

If an Airbag-Protector is definitely not required this fact must be specified at the ordering stage. The “No Airbag” option earns a reduction of the official price as a result. In this case a Backside-Cover will be supplied. This protects the zip and underneath of the harness.

The Backside Cover can also be ordered as an option for those pilots who sometimes want to use their EASINESS 3 without its protector.

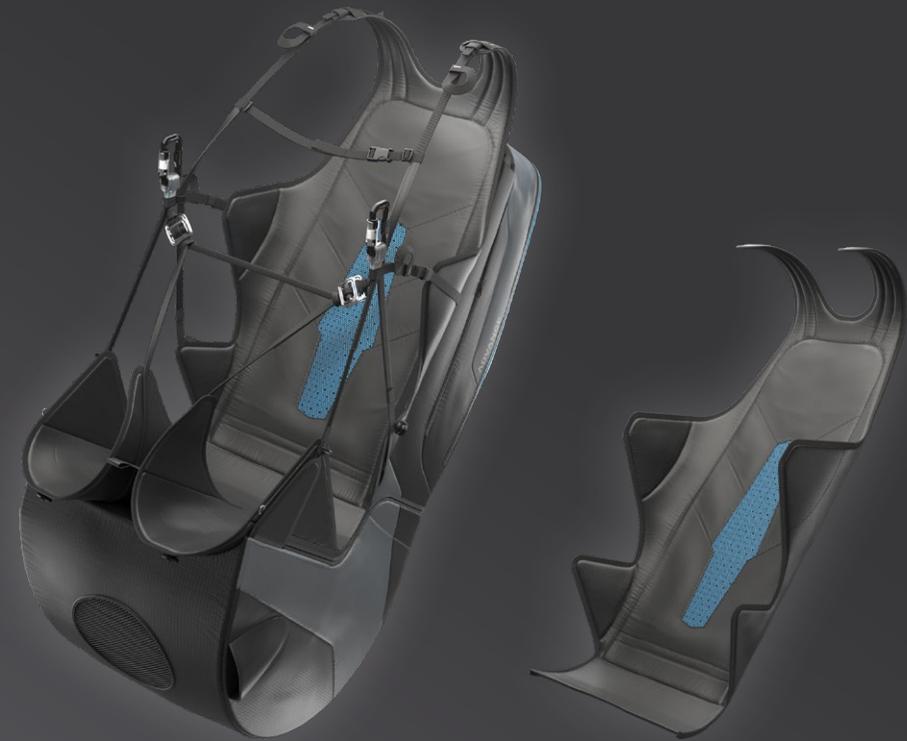

# EASINESS 3 compared with EASINESS 2

# EASINESS 3 Compared

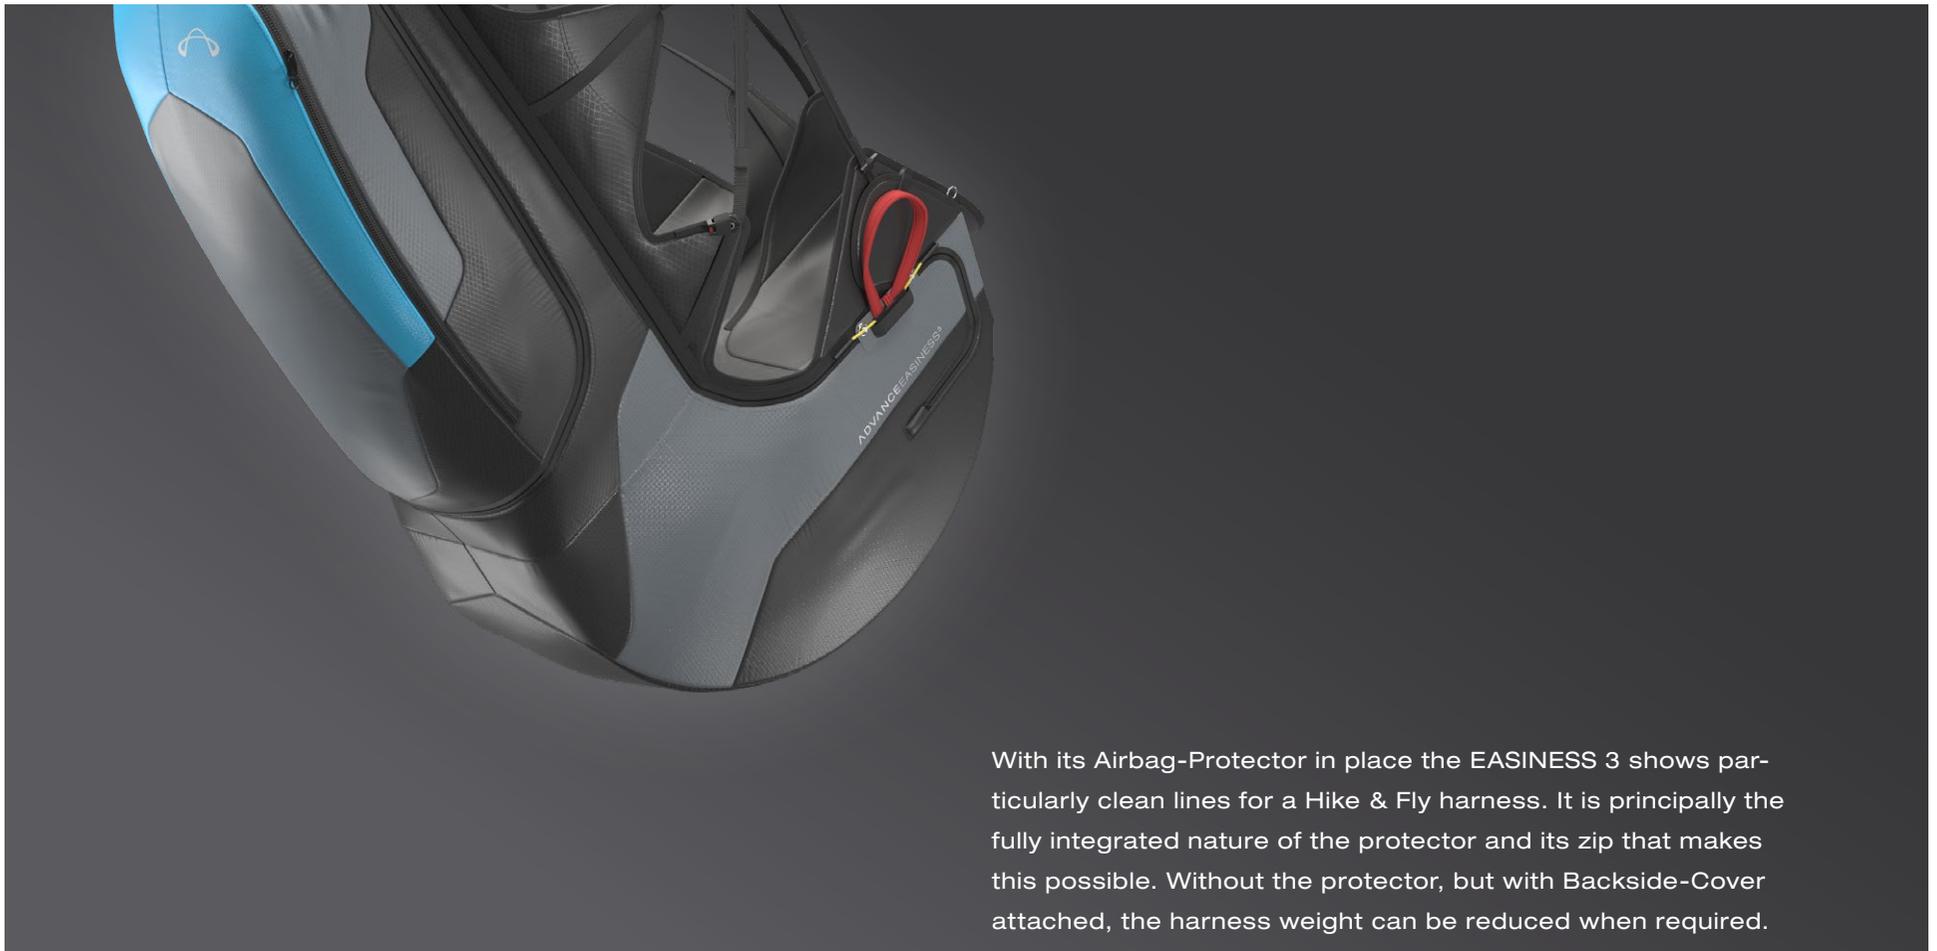

# A Comfort Plus

The EASINESS 3 Legpads have been lengthened and are lightly padded. This makes our popular Hike & Fly harness much more comfortable. 3D treatment of the ergonomic EASINESS 3 seat surface fits the pilot's body shape as if tailor-made. The detailed lumbar support design also provides good sitting comfort. This general high level of flying comfort also makes the EASINESS 3 very useful as an everyday harness.

# Clean Silhouette

With its Airbag-Protector in place the EASINESS 3 shows particularly clean lines for a Hike & Fly harness. It is principally the fully integrated nature of the protector and its zip that makes this possible. Without the protector, but with Backside-Cover attached, the harness weight can be reduced when required.

## 3 Sizes – Perfect fit

**S**

Pilot height  
155 to 172 cm

**M**

Pilot height  
165 to 183 cm

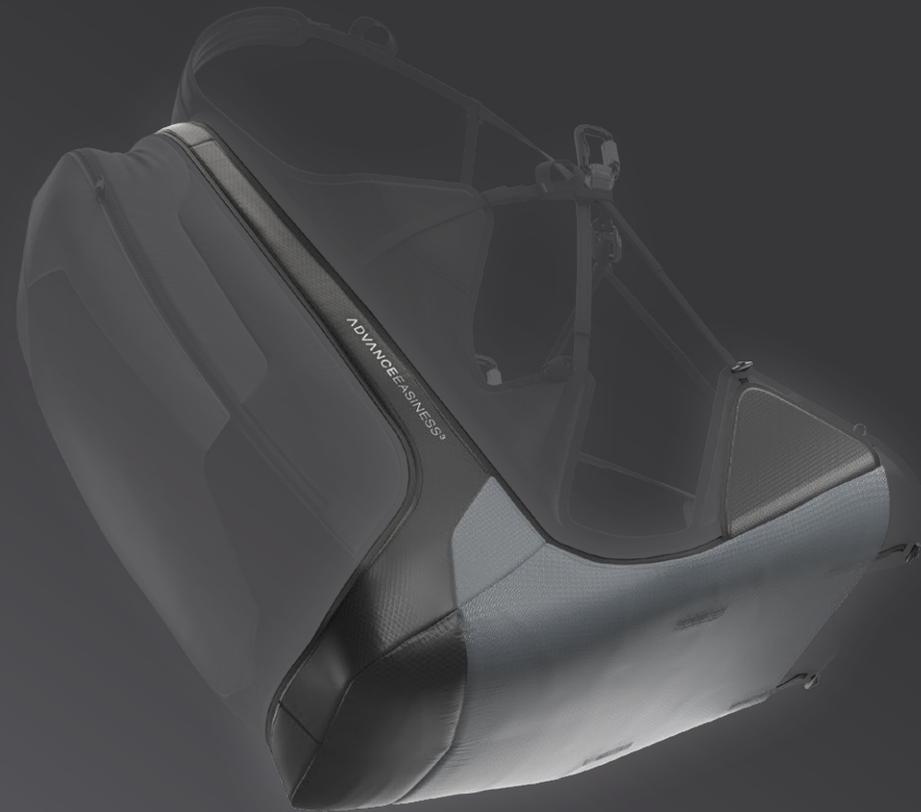

**L**

Pilot height  
178 to 202 cm

Three harness sizes mean that different pilot shapes and sizes can be ideally suited – pilot heights between 155 and 202 cm accommodated - whatever the relationship of back/leg lengths. An overlap of 8cm for S and M, and 5cm for M and L harnesses, guarantee a custom fit for everyone.

# Backside Cover as an Option

The optional Backside Cover is zipped in place for EASINESS 3 use without Airbag-Protector. It protects the zip track.

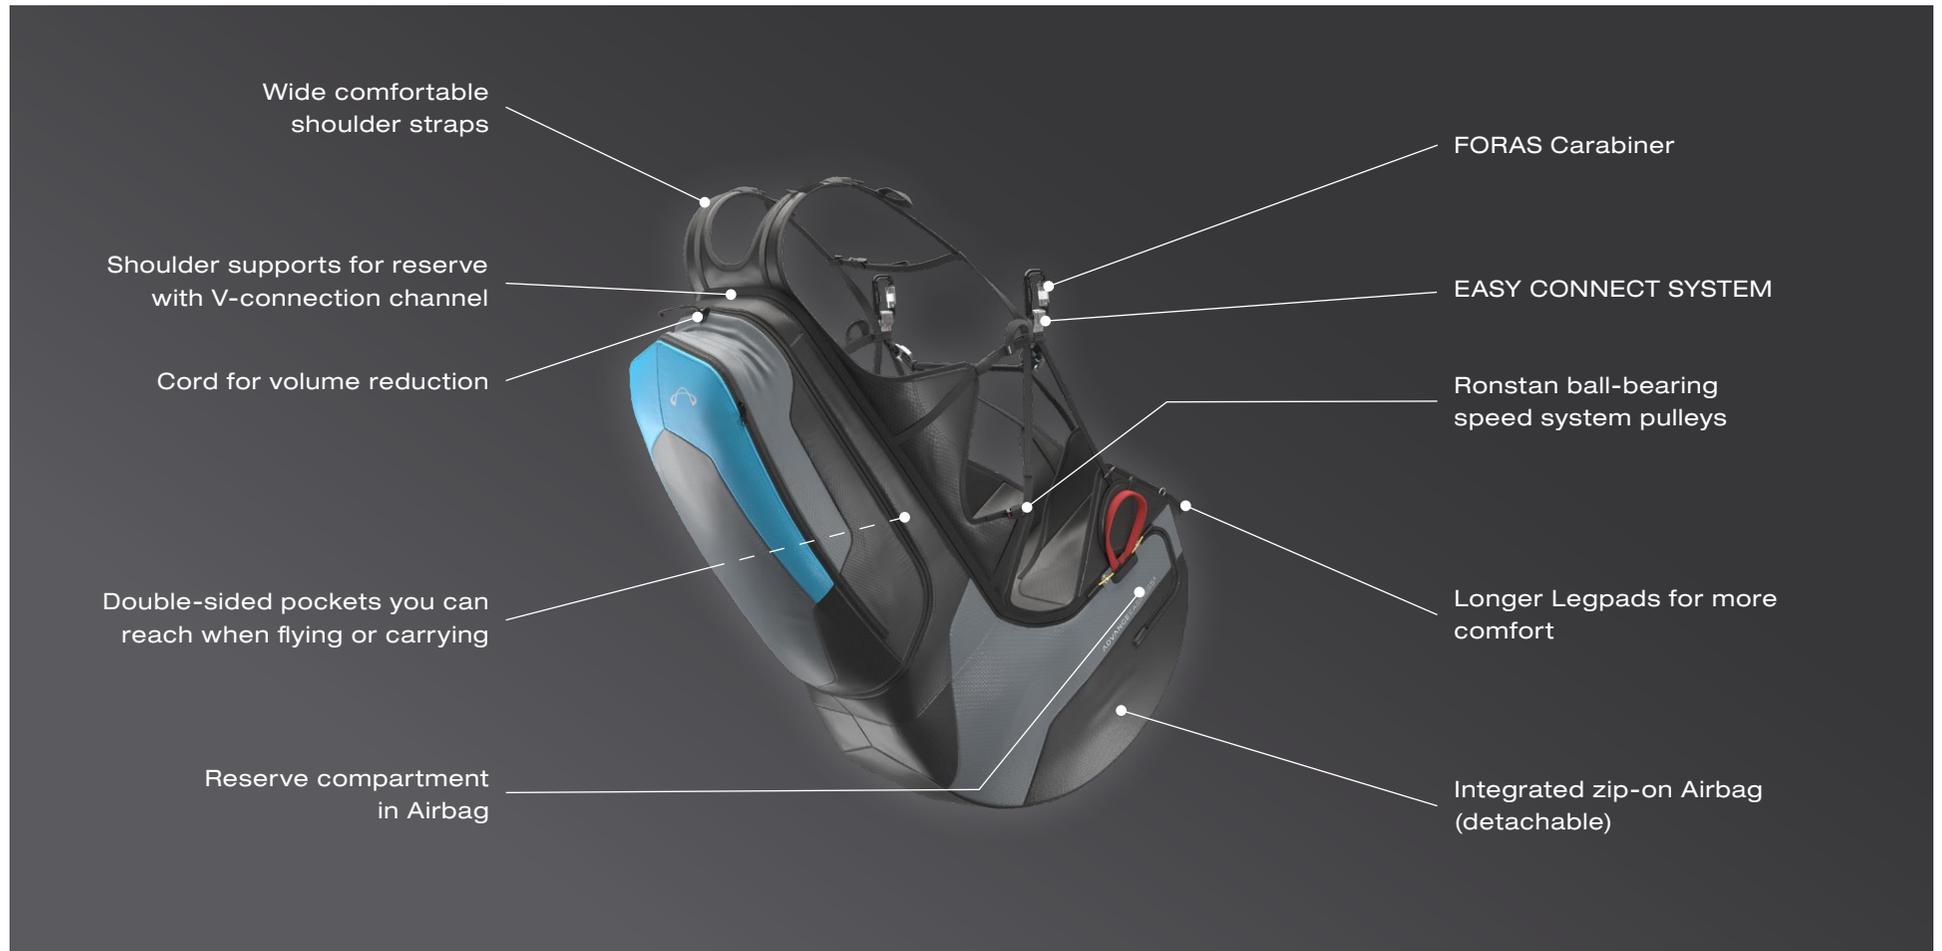

## IMPORTANT

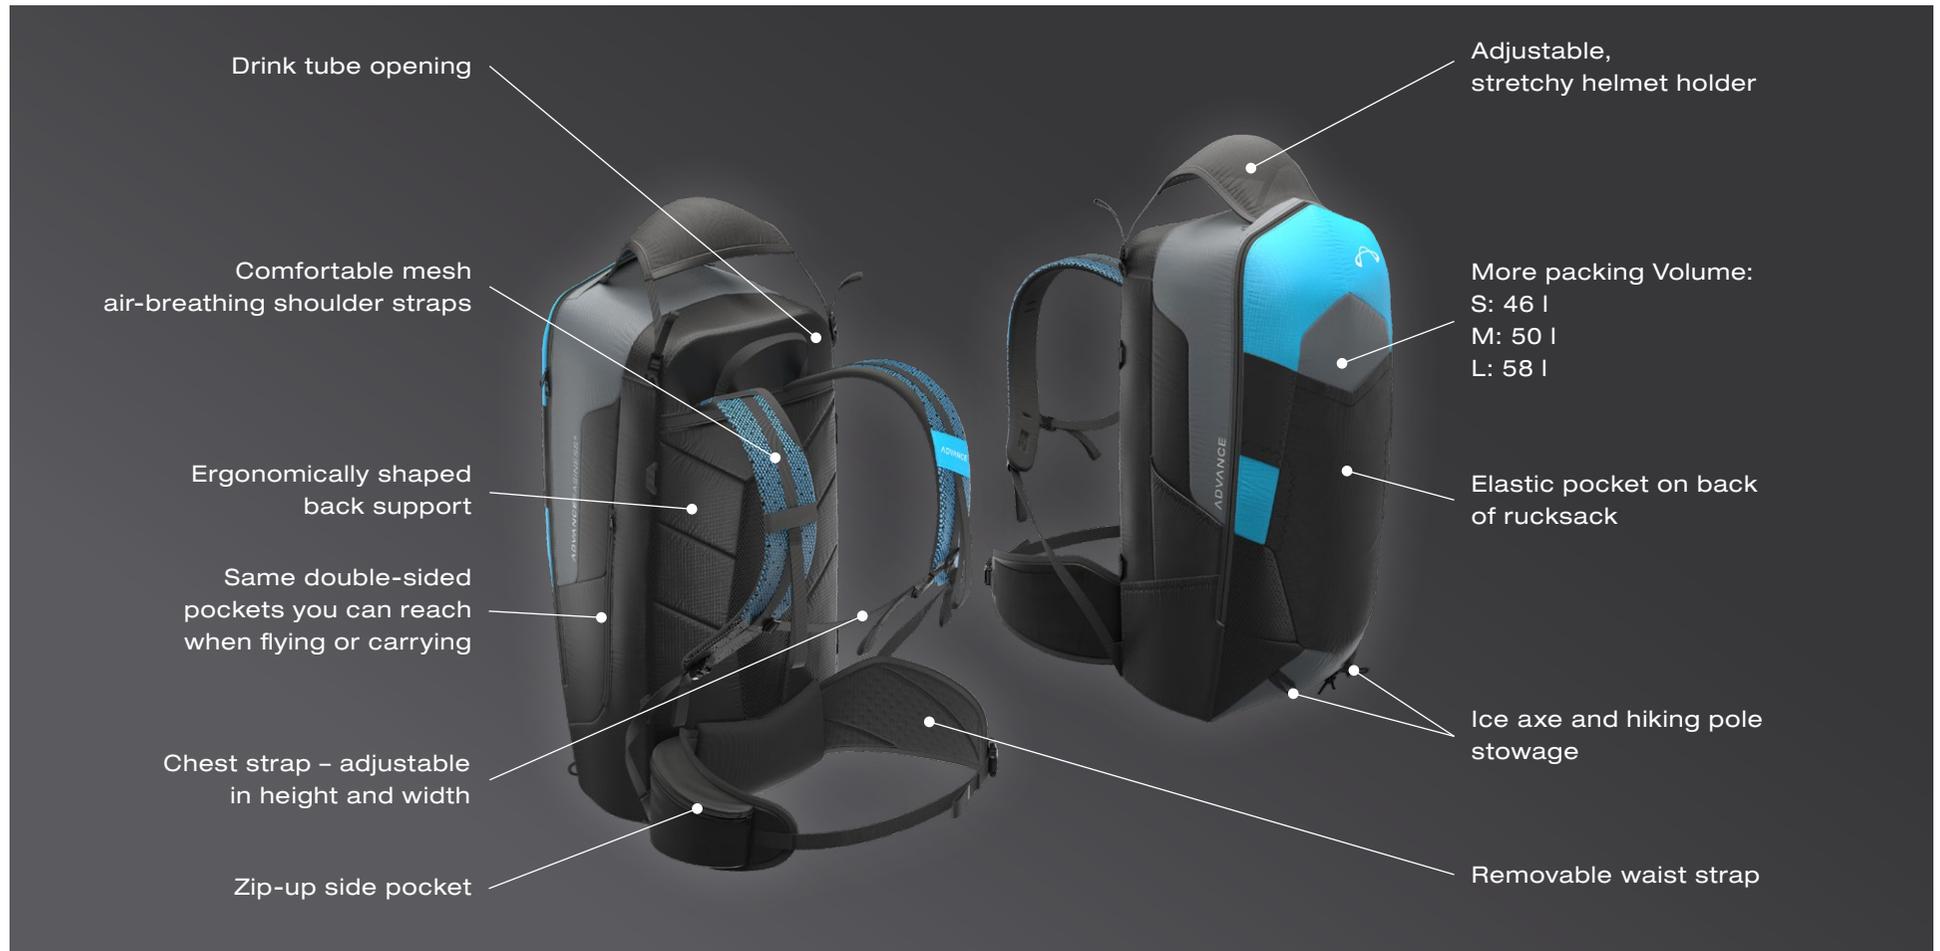

Don't fly without airbag or bottom cover.  
Your harness may be damaged.

# Harness Features

# Rucksack Features

# Routine Delivery Contents

- Ready-mounted, EN/LTF certified Airbag-Protector (detachable) with integrated reserve compartment
- Soft-Speed system
- 2 Edelrid FORAS Anti-twist carabiners
- Ball-bearing Ronstan speed pulleys
- Sewn-in reserve connection
- Reserve handle with connected four flap inner container
- Getting Started booklet

## Optional

- Backside Cover for flying without Airbag-Protector
- ZIP Light front reserve container
- Radio pocket for shoulder strap
