DHV TESTREPORT EN 926-2:2013+A1:2021

	<u>UP International GmbH</u> UP International GmbH	
Classification Winch towing Number of seats min / max	Yes	
Accelerator Trimmers	Yes	BEHAVIOUR AT MAX
	FLIGHT (68KG)	WEIGHT IN FLIGHT (85KG
	Josef Bauer No release B	Harald Buntz No release B
	Easy rising, some pilot correction is required No	Easy rising, some pilot correction required No
Landing Special landing technique required	A	ANO
Speeds in straight flight	Α	A
Trim speed more than 30 km/h Speed range using the controls larger than 10 km/h	Yes	Yes Yes
	Less than 25 km/h A	Less than 25 km/h
Symmetric control pressure Symmetric control travel	-	Increasing Greater than 60 cm
Dive forward angle on exit		A Dive forward less than 30°
Collapse occurs Pitch stability operating controls during accelerated flight	A	No
Collapse occurs		No
Roll stability and damping Oscillations	A Reducing	¦ A Reducing
<u>Stability in gentle spirals</u> Tendency to return to straight flight	A Spontaneous exit	A Spontaneous exit
Behaviour exiting a fully developed spiral dive Initial response of glider (first 180°)		A Immediate reduction of rate of tu
Tendency to return to straight flight Turn angle to recover normal flight	rate of turn decreasing)	Spontaneous exit (g force decreasing, rate of turn decreasing Less than 720°, spontaneous
Symmetric front collapse	Α	recovery
Recovery	Rocking back less than 45° Spontaneous in less than 3 s	Rocking back less than 45° Spontaneous in less than 3 s Dive forward 0° to 30°
Dive forward angle on exit Change of course Cascade occurs Folding lines used	Keeping course No	Keeping course No
Folding lines used <u>Unaccelerated collapse (at least 50 % chord)</u>		no A
-	Rocking back less than 45° Spontaneous in less than 3 s Dive forward 0° to 30°	Rocking back less than 45° Spontaneous in less than 3 s Dive forward 0° to 30°
Change of course Cascade occurs Folding lines used	Keeping course No	Keeping course No no
Accelerated collapse (at least 50 % chord)	Α	В
-	Rocking back less than 45° Spontaneous in less than 3 s Dive forward 0° to 30°	Rocking back less than 45°Spontaneous in less than 3 sDive forward 30° to 60°
Change of course Cascade occurs Folding lines used		Keeping course No no
//-	A	A
Dive forward angle on exit	Spontaneous in less than 3 s Dive forward 0° to 30°	Yes Spontaneous in less than 3 s Dive forward 0° to 30°
Change of course Cascade occurs	Changing course less than 45° No	Changing course less than 45° No
	A Spontaneous in less than 3 s No	A Spontaneous in less than 3 s No
/	A	A
Dive forward angle on exit Collapse Cascade occurs (other than collapses)	No collapse	Dive forward 0° to 30° No collapse No
Rocking back Line tension	Less than 45° Most lines tight	Less than 45° Most lines tight
Small asymmetric collapse Change of course until re-inflation Maximum dive forward or roll angle		A Less than 90° Dive or roll angle 0° to 15°
Re-inflation behaviour Total change of course	Spontaneous re-inflation Less than 360°	Spontaneous re-inflation Less than 360°
Collapse on the opposite side occurs Twist occurs	cells with a spontaneous re inflation)	No (or only a small number of collapsed cells with a spontaneou re inflation) No
Cascade occurs Folding lines used	-	No no
Change of course until re-inflation		B 90° to 180°
Maximum dive forward or roll angle Re-inflation behaviour Total change of course	Spontaneous re-inflation	Dive or roll angle 15° to 45° Spontaneous re-inflation Less than 360°
	cells with a spontaneous re inflation)	No (or only a small number of collapsed cells with a spontaneou re inflation)
Twist occurs Cascade occurs Folding lines used	No	No No no
Small asymmetric collapse accelerated Change of course until re-inflation	A Less than 90°	A Less than 90°
Maximum dive forward or roll angle Re-inflation behaviour	Dive or roll angle 15° to 45° Spontaneous re-inflation	Dive or roll angle 15° to 45° Spontaneous re-inflation
Total change of course Collapse on the opposite side occurs		Less than 360° No (or only a small number of collapsed cells with a spontaneou re inflation)
Twist occurs Cascade occurs Folding lines used	No	No No
Large asymmetric collapse accelerated	В	B
Change of course until re-inflation Maximum dive forward or roll angle	Dive or roll angle 15° to 45° Spontaneous re-inflation	90° to 180° Dive or roll angle 15° to 45° Spontaneous re-inflation
Re-inflation behaviour	Less than 360°	Less than 360° No (or only a small number of
Total change of course Collapse on the opposite side occurs		collapsed cells with a spontaneou
Total change of course Collapse on the opposite side occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used	No (or only a small number of collapsed cells with a spontaneous re inflation) No No no	collapsed cells with a spontaneou re inflation) No No no
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used	No (or only a small number of collapsed cells with a spontaneous re inflation) No No no A Yes	collapsed cells with a spontaneou re inflation) No No
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course	No (or only a small number of collapsed cells with a spontaneous re inflation) No No no A Yes Yes Yes	collapsed cells with a spontaneou re inflation) No No no Yes Yes
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin	No (or only a small number of collapsed cells with a spontaneous re inflation) No No no A Yes Yes More than 50 % of the symmetric control travel A	collapsed cells with a spontaneou re inflation) No No no A Yes Yes More than 50 % of the symmetric control travel
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency	No (or only a small number of collapsed cells with a spontaneous re inflation) No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No	collapsed cells with a spontaneou re inflation) No No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency Spin occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No	collapsed cells with a spontaneou re inflation) No No No no Yes Yes Yes More than 50 % of the symmetric control travel
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency Spin occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90°	collapsed cells with a spontaneou re inflation) No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No No
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Course Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No A Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No A Changing course less than 45°	collapsed cells with a spontaneou re inflation) No No No No No Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Changing course less than 45°
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No No Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s	collapsed cells with a spontaneou re inflation) No No No No No Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Changing course less than 45°
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Cours Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Recovery Dive forward angle on exit Cascade occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No No Yes Yes Yes More than 50 % of the symmetric control travel A No A No A No A Changing in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30°	collapsed cells with a spontaneou re inflation) No No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight spar Spontaneous in less than 3 s
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Course Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No No No A Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight	collapsed cells with a spontaneou re inflation) No No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No A No A No A Stops spinning in less than 90° No No A Changing course less than 45° Remains stable with straight spar Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Course Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Behaviour during big ears Recovery Dive forward angle on exit	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No No No A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30°	collapsed cells with a spontaneou re inflation) No No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight spar Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30°
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Cours Cours Cours Cours Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Cascade occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No No No A A More than 50 % of the symmetric control travel A No A No A Changing in less than 90° No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° No	collapsed cells with a spontaneou re inflation) No No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight spar Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° No
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No No No Yes Yes More than 50 % of the symmetric control travel A No A No A No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° A	collapsed cells with a spontaneou re inflation) No No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight spar Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30°
Total change of course Collapse on the opposite side occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No No No No Yes Yes More than 50 % of the symmetric control travel A No A No A No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° A	collapsed cells with a spontaneou re inflation) No No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No A Changing course less than 90° No A Changing course less than 45° Remains stable with straight spar Spontaneous in less than 3 s Dive forward 0° to 30° No Xo A Standard technique Stable flight Spontaneous in less than 3 s Dive forward 0° to 30° No
