DHV TESTREPORT LTF DHV TESTREPORT EN DATASHEET

PARTS LIST OPERATING INSTRUCTION

DHV TESTREPORT EN 926-2:2013+A1:2021

	DHV GS-01-2800-23 Skywalk GmbH & Co. KG		
Manufacturer Classification	Skywalk GmbH & Co. KG C		
Winch towing Number of seats min / max	1/1	STATE Y	
Accelerator Trimmers	No		
Test pilots	BEHAVIOUR AT MIN WEIGHT IN FLIGHT (105KG)	BEHAVIOUR AT MAX WEIGHT IN FLIGHT (125KG)	
	Mario Eder	Sebastian Mackrodt	
Inflation/take-off	No release	No release	
· <u>····································</u>	Easy rising, some pilot correction is required	· · · · · · · · · · · · · · · · · · ·	
Special take off technique required	No	No	
Landing Special landing technique required		A No	
<u>Speeds in straight flight</u>	В	Α	
Trim speed more than 30 km/h Speed range using the controls larger than 10		Yes Yes	
km/h Minimum speed	25 km/h to 30 km/h	Less than 25 km/h	
		A	
Symmetric control pressure Symmetric control travel	-	Increasing Greater than 65 cm	
Pitch stability exiting accelerated flight Dive forward angle on exit		A Dive forward less than 30°	
Collapse occurs		No	
<u>Pitch stability operating controls during</u> accelerated flight	Α	Α	
Collapse occurs	1	No	
Roll stability and damping Oscillations		A Reducing	
<i>/</i>	·	Α	
Tendency to return to straight flight		Spontaneous exit	
Behaviour exiting a fully developed spiral dive Initial response of glider (first 180°)	Immediate reduction of rate of turn	en : keine unmittelbare Reaktion	
	Spontaneous exit (g force decreasing, rate of turn decreasing) Less than 720°, spontaneous recovery	Spontaneous exit (g force decreasing rate of turn decreasing) 720° to 1 080°, spontaneous recover	
		c	
Entry	Rocking back less than 45° Spontaneous in 3 s to 5 s	Rocking back less than 45° Spontaneous in 3 s to 5 s	
Dive forward angle on exit Change of course	Dive forward 30° to 60° Entering a turn of less than 90°	Dive forward 0° to 30° Entering a turn of less than 90°	
Cascade occurs Folding lines used	-	No yes	
<u>Unaccelerated collapse (at least 50 % chord)</u>	·	C	
	Rocking back less than 45° Spontaneous in 3 s to 5 s Dive forward 30° to 60°	Rocking back less than 45° Spontaneous in 3 s to 5 s Dive forward 30° to 60°	
_	Entering a turn of less than 90°	Dive forward 30° to 60° Entering a turn of 90° to 180° No	
Folding lines used	yes	yes	
	C Rocking back less than 45°	C Rocking back less than 45°	
	Spontaneous in 3 s to 5 s	Spontaneous in 3 s to 5 s Dive forward 30° to 60°	
Cascade occurs	-	Entering a turn of less than 90° No	
Folding lines used Exiting deep stall (parachutal stall)	-	yes B	
Deep stall achieved	Yes	Yes	
Dive forward angle on exit	Spontaneous in less than 3 s Dive forward 30° to 60° Changing course less than 45°	Spontaneous in less than 3 s Dive forward 30° to 60° Changing course less than 45°	
Cascade occurs		No	
<i></i>	A Spontaneous in less than 3 s	A Spontaneous in less than 3 s	
Cascade occurs	-	No	
<u>Recovery from a developed full stall</u> Dive forward angle on exit		B Dive forward 30° to 60°	
Cascade occurs (other than collapses)		No collapse No	
Rocking back Line tension	Most lines tight	Less than 45° Most lines tight	
Small asymmetric collapse Change of course until re-inflation	•	c Less than 90°	
Maximum dive forward or roll angle Re-inflation behaviour	Dive or roll angle 15° to 45°	Dive or roll angle 15° to 45° Spontaneous re-inflation	
Total change of course Collapse on the opposite side occurs	Less than 360° No (or only a small number of collapsed cells with a spontaneous re inflation)	Less than 360° No (or only a small number of collapsed cells with a spontaneous re	
Twist occurs		inflation)	
Cascade occurs Folding lines used		No yes	
·		C	
Change of course until re-inflation Maximum dive forward or roll angle Re-inflation behaviour	Dive or roll angle 45° to 60°	Less than 90° Dive or roll angle 45° to 60° Spontaneous re-inflation	
Total change of course	·	Less than 360°	
Twist occurs	with a spontaneous re inflation) No	No	
Cascade occurs Folding lines used	-	No yes	
,,,		C Less than 90°	
Change of course until re-inflation Maximum dive forward or roll angle Re-inflation behaviour	Dive or roll angle 15° to 45°	Less than 90° Dive or roll angle 15° to 45° Spontaneous re-inflation	
Total change of course	Less than 360° No (or only a small number of collapsed cells	Less than 360° No (or only a small number of	
Twist occurs	with a spontaneous re inflation) No	collapsed cells with a spontaneous re inflation) No	
Cascade occurs Folding lines used	No	No yes	
		C	
Change of course until re-inflation Maximum dive forward or roll angle	Dive or roll angle 45° to 60°	90° to 180° Dive or roll angle 45° to 60°	
Buch Alexandre Contraction 1	Spontaneous re-inflation	Inflates in less than 3 s from start of pilot action Less than 360°	
Re-inflation behaviour Total change of course	Less than 360°		
Total change of course Collapse on the opposite side occurs	No (or only a small number of collapsed cells with a spontaneous re inflation)		
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No	No	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used	No (or only a small number of collapsed cells with a spontaneous re inflation) No yes	No No no	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used	No (or only a small number of collapsed cells with a spontaneous re inflation) No Yes C	No	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s	No (or only a small number of collapsed cells with a spontaneous re inflation) No No yes C Yes Yes	No No no A Yes Yes	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s	No (or only a small number of collapsed cells with a spontaneous re inflation) No No yes C Yes Yes	No No no A Yes	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin	No (or only a small number of collapsed cells with a spontaneous re inflation) No No yes C Yes Yes 25 % to 50 % of the symmetric control travel A	No No no A Yes Yes More than 50 % of the symmetric	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No yes C Yes Yes 25 % to 50 % of the symmetric control travel A No	No No no A Yes Yes More than 50 % of the symmetric control travel	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes Yes 25 % to 50 % of the symmetric control travel A No	No No no A Yes Yes More than 50 % of the symmetric control travel A No	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency Spin occurs Recovery from a developed spin	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes Yes 25 % to 50 % of the symmetric control travel A No A	No No no A Yes Yes More than 50 % of the symmetric control travel A No A	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency Spin occurs	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes C Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90°	No No no A Yes Yes More than 50 % of the symmetric control travel A No A No	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No	No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90°	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Not carried out because the manoeuvre is excluded in the	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No Yes C Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No	No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90°	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Course Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Not carried out because the manoeuvre is excluded in the Big ears	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes C Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Standard technique	No No no A Yes Yes More than 50 % of the symmetric control travel A No A No Stops spinning in less than 90° No	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Not carried out because the manoeuvre is excluded in the Big ears Entry procedure Behaviour during big ears	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes C Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Stops spinning in less than 90° No S Standard technique Stable flight Recovery through pilot action in less than a further 3 s	No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No B Dedicated controls Stable flight Spontaneous in 3 s to 5 s	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Not carried out because the manoeuvre is excluded in the Big ears Entry procedure Behaviour during big ears Recovery	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No yes C Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Stops spinning in less than 90° No B Standard technique Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30°	No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No B Dedicated controls Stable flight Spontaneous in 3 s to 5 s Dive forward 0° to 30°	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Not carried out because the manoeuvre is excluded in the Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Stops spinning in less than 90° No B Standard technique Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls	No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No B Dedicated controls Stable flight Spontaneous in 3 s to 5 s Dive forward 0° to 30° A Dedicated controls	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Cours Cours Cours Cours Cours Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Not carried out because the manoeuvre is excluded in the Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight	No (or only a small number of collapsed cells with a spontaneous re inflation) No No Yes Yes 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Stops spinning in less than 90° No B Standard technique Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls	No No no A Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No B Dedicated controls Stable flight Spontaneous in 3 s to 5 s Dive forward 0° to 30° A	
Total change of course Collapse on the opposite side occurs Twist occurs Cascade occurs Folding lines used Directional control with a maintained asymmetric collapse Able to keep course 180° turn away from the collapsed side possible in 10 s Amount of control range between turn and stall or spin Trim speed spin tendency Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Not carried out because the manoeuvre is excluded in the Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight Entry procedure Behaviour during big ears Recovery	No (or only a small number of collapsed cells with a spontaneous re inflation) No No No Yes C 25 % to 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No Stops spinning in less than 90° No B Standard technique Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30°	No No no A Yes Yes Yes More than 50 % of the symmetric control travel A No A No A Stops spinning in less than 90° No B Dedicated controls Stable flight Spontaneous in 3 s to 5 s Dive forward 0° to 30° A Dedicated controls Stable flight	

No other flight procedure or configuration described in the user's manual
