TECHNICAL DATA DHV TESTREPORT						DHY

GIN AVID S		
Type designation	GIN Avid S	
Type test reference no	DHV GS-01-2714-22	
Holder of certification	GIN Gliders Inc.	
	GIN Gliders Inc.	
Classification		
Winch towing		
Number of seats min / max		
Accelerator		
Trimmers	No	Contraction of the second
	DEMANTOND AT MIN WELCHT IN	
	BEHAVIOUR AT MIN WEIGHT IN FLIGHT (75KG)	BEHAVIOUR AT MAX WEIGHT IN FLIGHT (95KG)
Test pilots	FLIGHT (75KG)	BEHAVIOUR AT MAX WEIGHT IN FLIGHT (95KG)
Test pilots	FLIGHT (75KG)	IN FLIGHT (95KG)

	Beni Stocker No release B	Harald Buntz No release B
Rising behaviour	Easy rising, some pilot correction is required	Easy rising, some pilot correction is required
Special take off technique required Landing		No
Special landing technique required	No	No
<u>Speeds in straight flight</u> Trim speed more than 30 km/h		A Yes
Speed range using the controls larger than 10 km/h Minimum speed	Yes Less than 25 km/h	Yes Less than 25 km/h
Symmetric control pressure Symmetric control travel	-	Increasing Greater than 60 cm
Pitch stability exiting accelerated flight	Α	Α
Dive forward angle on exit Collapse occurs		Dive forward less than 30° No
Pitch stability operating controls during accelerated flight	Α	Α
Collapse occurs	No	No
Roll stability and damping Oscillations		A Reducing
		A
Tendency to return to straight flight	Spontaneous exit	Spontaneous exit
Behaviour exiting a fully developed spiral dive Initial response of glider (first 180°)		A Immediate reduction of rate of turn
	Spontaneous exit (g force decreasing, rate of turn decreasing)	Spontaneous exit (g force decreasin rate of turn decreasing) Less than 720°, spontaneous recover
		B
	Rocking back less than 45° Spontaneous in 3 s to 5 s	Rocking back less than 45° Spontaneous in 3 s to 5 s
	Entering a turn of less than 90°	Dive forward 0° to 30° Entering a turn of less than 90°
Cascade occurs Folding lines used	-	No no
Unaccelerated collapse (at least 50 % chord) Entry	B Rocking back less than 45°	B Rocking back less than 45°
	Spontaneous in 3 s to 5 s	Spontaneous in 3 s to 5 s Dive forward 0° to 30°
Change of course Cascade occurs	Entering a turn of less than 90° No	Entering a turn of less than 90° No
Folding lines used Accelerated collapse (at least 50 % chord)		no B
Entry	Rocking back less than 45°	Rocking back less than 45°
Dive forward angle on exit	Spontaneous in 3 s to 5 s Dive forward 30° to 60° Entering a turn of less than 90°	Spontaneous in 3 s to 5 s Dive forward 30° to 60° Entering a turn of less than 90°
Cascade occurs Folding lines used	No	No no
		Α
-	Spontaneous in less than 3 s	Yes Spontaneous in less than 3 s
Dive forward angle on exit Change of course Cascade occurs	Changing course less than 45°	Dive forward 0° to 30° Changing course less than 45° No
		No A
	Spontaneous in less than 3 s	Spontaneous in less than 3 s No
<u>Recovery from a developed full stall</u>	Α	A
Dive forward angle on exit Collapse	Dive forward 0° to 30° No collapse	Dive forward 0° to 30° No collapse
Cascade occurs (other than collapses) Rocking back	Less than 45°	No Less than 45°
	Most lines tight	Most lines tight
Change of course until re-inflation Maximum dive forward or roll angle	Less than 90°	Less than 90° Dive or roll angle 15° to 45°
Re-inflation behaviour Total change of course	Spontaneous re-inflation	Spontaneous re-inflation Less than 360°
	No (or only a small number of collapsed cells with a spontaneous re inflation)	No (or only a small number of collapsed cells with a spontaneous reinflation)
Twist occurs Cascade occurs		No
Folding lines used		no
Change of course until re-inflation	90° to 180°	90° to 180°
Maximum dive forward or roll angle Re-inflation behaviour	Spontaneous re-inflation	Dive or roll angle 15° to 45° Spontaneous re-inflation
	No (or only a small number of collapsed cells with a spontaneous re inflation)	Less than 360° No (or only a small number of collapsed cells with a spontaneous r
Twist occurs Cascade occurs		inflation) No No
Folding lines used		no
Small asymmetric collapse accelerated Change of course until re-inflation		A Less than 90°
Maximum dive forward or roll angle Re-inflation behaviour	Dive or roll angle 15° to 45°	Dive or roll angle 15° to 45° Spontaneous re-inflation
	No (or only a small number of collapsed cells	
Twist occurs	with a spontaneous re inflation) No	collapsed cells with a spontaneous r inflation) No
Cascade occurs Folding lines used	No	No no
;;		В
Change of course until re-inflation Maximum dive forward or roll angle	Dive or roll angle 15° to 45°	90° to 180° Dive or roll angle 15° to 45°
Re-inflation behaviour Total change of course Collapse on the opposite side occurs	•	Spontaneous re-inflation Less than 360° No (or only a small number of
	with a spontaneous re inflation)	collapsed cells with a spontaneous rinflation)
Twist occurs Cascade occurs Folding lines used	No	No No no
Directional control with a maintained		
asymmetric collapse Able to keep course		Yes
180° turn away from the collapsed side possible in 10 s	Yes	Yes
Amount of control range between turn and stall or spin	More than 50 % of the symmetric control travel	More than 50 % of the symmetric control travel
		A
<u>Trim speed spin tendency</u> Spin occurs		No
Spin occurs	No	<u>.</u>
Spin occurs <u>Low speed spin tendency</u> Spin occurs	No A No	No A No
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release	No A No A Stops spinning in less than 90°	No A No A Stops spinning in less than 90°
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs	No A No A Stops spinning in less than 90° No	No A No A Stops spinning in less than 90° No
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release	No A No A Stops spinning in less than 90° No A Changing course less than 45°	No A No A Stops spinning in less than 90° No A Changing course less than 45°
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s	No A No A Stops spinning in less than 90° No A
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release	No A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30°	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No	No A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30°
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery	No A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery	No A A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Recovery Dive forward angle on exit Big ears in accelerated flight	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight Entry procedure Behaviour during big ears Entry procedure Behaviour during big ears	No A A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30°	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight Entry procedure Behaviour during big ears Recovery	No A A No A No A A Stops spinning in less than 90° No A Changing course less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30°	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight Entry procedure Behaviour during big ears Recovery	No A A No A No A A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30°	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s
Spin occurs Low speed spin tendency Spin occurs Recovery from a developed spin Spin rotation angle after release Cascade occurs B-line stall Change of course before release Behaviour before release Recovery Dive forward angle on exit Cascade occurs Big ears Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Big ears in accelerated flight Entry procedure Behaviour during big ears Recovery Dive forward angle on exit Behaviour during big ears Recovery Dive forward angle on exit Behaviour immediately after releasing the accelerator while maintaining big ears	No A No A No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° A A A A A A A A A A A A A A A A A A A	No A No A Stops spinning in less than 90° No A Changing course less than 45° Remains stable with straight span Spontaneous in less than 3 s Dive forward 0° to 30° No B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30° B Dedicated controls Stable flight Recovery through pilot action in less than a further 3 s Dive forward 0° to 30°
